

LAWSON'S CAFÉ SCIENTIFIQUE PRESENTS

AN IMAGE OF THE FUTURE: INNOVATIONS IN IMAGING RESEARCH | PART 1 OF THE CANADA 150 SERIES

TUESDAY, MAY 23, 2017

7 to 9 p.m. at the Mercato at Brescia, Clare Hall, 271 Ramsay Road

Lawson Health Research Institute has long been a leader in biomedical imaging. The first MRI images in Canada were captured at St. Joseph's Hospital and we were the first in the country to install PET/CT and PET/MRI scanners. New developments in imaging research continue to enhance the diagnosis, prevention and treatment of a wide range of diseases, from cancer to PTSD. Join us to hear a panel of Lawson Imaging scientists discuss their cutting-edge work at this free community event.

Imaging of the heart: Seeing the cause of chest pain more clearly
DR. AARON SO

Using light and sound to improve breast surgery
DR. JEFF CARSON

How imaging can improve the management of epilepsy
DR. UDUNNA ANAZODO

In celebration of Canada's 150th anniversary as a nation, this event is the first of a two-part series focusing on the future vision for health care in our country and the legacy our research will leave.
